

Applications Areas

UAO Company was founded in 2015 with the aim of designing, manufacturing and providing technical and engineering services in remote sensing and telematics.

Radio systems in different frequency spectrums, satellite and industrial radar subsystems are among the products of the company.

The Weather business area is divided into three business segments: Meteorology, Energy and Transportation. Real-time, uninterrupted and reliable weather data is the cornerstone for an efficient operation by customers including meteorological institutes, airports and airlines, road and railroad authorities, renewable energy customers, maritime market segments, as well as defense forces.

DigiSonde® enables long time sounding operation, allowing various kinds of sounding, such as ozone monitoring, air pollutants (CO₂, CO, NO₂, dust and particles) due to an embedded expansive interface.
